

Mid-Size Firm Ranking

Employing between 101 and 499 employees, the Mid-Size Firm Ranking includes five firms on the top 10 list overall. Walter P Moore and Associates, Inc., No. 6 overall and No. 2 on the Mid-Size Firm Ranking, is also ranked No. 1 on the Best Structural Engineering Firms To Work For 2007 list, an honor it accepts proudly for the third consecutive year.

More firms in the Mid-Size Firm Ranking offer in-house professional development and training opportunities, such as company universities, than their smaller counterparts. As a benefit many existing employees and new recruits desire, these investments often pay off by providing higher-quality service for clients, while also improving recruiting and retention. Wolverton & Associates, Inc., the No. 2 ranked firm overall and No. 1 mid-sized firm, devoted attention to its programs this year by implementing formal project manager training and high potential leadership programs, as well as establishing training/professional development budgets for each employee.

Many mid-sized firms can balance the fun, family-oriented feel many small firms pride themselves on, while providing structured programs and policies more typical of larger firms — creating enviable cultures and great places to work.

Rank	Firm
